MARINI QUARRIES GROUP

RUSTICA

A heavy-series pneumatic block-cutting machine, suitable for carrying out primary vertical (or horizontal) drilling and bank-side squaring in the quarry. Prearranged to be used with one or two 24/30 rock-drills. Devices of the column allow an easy adaptation to the desired drilling lines, both in cross and side direction, achieving slopes as high as 25°.

BIG RUSTICA

BIG RUSTICA is a vertical block-cutting machine with 4 independent and shock-absorbed rock drills: it represents the utmost expression of the technological evolution in pneumatic drilling. Heavy and very robust structure allows it to be quickly positioned, avoiding its anchorage to the bank-sides. The machine is designed for bank-side squaring when reduced drilling time is required and high performance is essential. A column with 2,40 or 3,20 m first starting drill steel is recommended.

DRILLS

MARINI mod. MA 90SR/30Kg Pneumatico
Silenced Rotopercussion pneumatic rock-drill for 7/8" x 4¼" or 1" x 4¼" rock drills >

MARINI mod. MA 40/44Kg Idraulico
Rotopercussion hydraulic rock-drill whit separate rotation for 7/8" x 4¼" or 1" x 4¼" rock drills.

DRILLER

Ideal pneumatic perforator to execute the holes for diamond wire passing. It is equipped with a rotating head and a down-the-hole hammer that allows to reach drilling depth of 25/30 meters even with inhomogeneities of the rock keeping always high drilling speed.

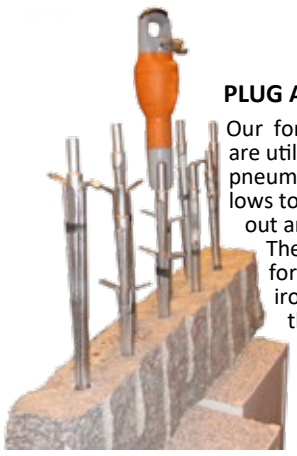

DTH HAMMERS >

This hammer is the ideal solution to execute large diameter holes. This continuous hammering also minimizes the "brekage effect" or problems with non homogenous rocks in order to assure straight drilling. The normal working pressure is of 7 bar but can be used at higher pressures in order to increase performances.

INTEGRAL DRILL STEEL, THREADED AND TAPERED RODS

PLUG AND FEATHERS

Our forged plug and feathers are utilized by means of a small pneumatic hammer which allows to split rapidly and without any manual intervention. These are tempered and forged using good class iron which guarantees them from deforming and insures a long life. Are available in various lengths and diameters.

DRILL STEEL SHARPENER

Portable drill steel sharpener with pneumatic motor >

HYDRO BAG

Hydro Bag is made up of a power pack which utilizes up to 3 bags at the same time. The metallic bags are thin enough to be placed in the cut made by the diamond wire. The power pack pump pushes water into the bags at the pressure of 30 bar, and so the consequent movement to the slices. The possibility of using up to 3 bags, all connected to the same power pack, produces a pushing capacity of 900 Tons >

JASCO

Pneumatic sharpener for down the hole hammer bits

QUARRY ELECTRICAL BOARD

Quarry plug board >
