MARINI QUARRIES GROUP

MICRO FIL

Diamond wire saw with main motor power of 12 HP for squaring marble or granite blocks.

GRAN FIL ELECTRONIC

Diamond wire saw for cutting granite with main motor power of 50/60/75 HP and variable wire speed controlled by inverter. The translation and 360° rotation of the flywheel-holder head are mechanical and allows an easy and fast positioning of the machine as well as the execution of two parallel cuts at the maximum distance of 1900 mm. Available on demand four wheel drive model. The model GRAN FIL STANDARD has a motorized translation and 360° rotation of the flywheel-holder head.

GRAN FIL SUPER ELECTRONIC & GRAN FIL SUPER ELECTRONIC SP

Diamond wire saw for cutting granite, marble, reinforced concrete and auriferous deposit equipped with main motor power of 50/60/75 HP and variable wire speed controlled by inverter. The translation and 360° rotation of flywheel-holder head are motorized and allow an easy and fast positioning of the machine as well as the execution of two parallel cuts at the maximum distance of 2100 mm. All the movements of the machine are motorized and suitable automa tic mechanism keep the constant control of the diamond wire tensioning both in manual and in automatic working conditions. The GRAN FIL SUPER ELECTRONIC SP version is available with 75/100 HP motor, available on demand four wheel drive model.

MINI MOBIL FIL

Diamond wire saw machine running on 6 mt which can be folded on a crawler self-propelled unit for quick machine positioning. The MINI MOBIL FIL unit can be supplied with MARINI diamond wire saws for marble from 15/20 and 25 HP.

MOBIL FIL

Diamond wire saw machine running on 9 mt which can be folded on a crawler self-propelled and radio-controlled unit for quick machine positioning. The MINI MOBIL FIL unit can be supplied with MARINI diamond wire saws for marble from 50/60/75 and 100 HP.

CUTTING

MINI FIL

Diamond wire saw with main motor power of 15/20/25 HP with high starting torque and fixed speed for small cut of the benches or squaring of marble or granite blocks and, when supplied with proper peripheral speeds, for controlled demolition on reinforced concrete. In the MINI FIL SUPER version, the flywheel can be moved sideways. In the MINI FIL ELECTRONIC versions, an inverter permits the use of variable speeds.

MAR FIL

Diamond wire saw for cutting marble with main motor power of 40/50/60 HP with fixed wire speed. The translation and 360° rotation of the flywheel-holder head are mechanical and allow an easy and fast positioning of the machine as well as the execution of two parallel cuts at the maximum distance of 1900 mm. Both in manual and in automatic working condition, suitable motors and automatic mechanism allow the constant control of the diamond wire. The model MAR FIL STANDARD has a motorized translation and 360° rotation of the flywheel-holder head.

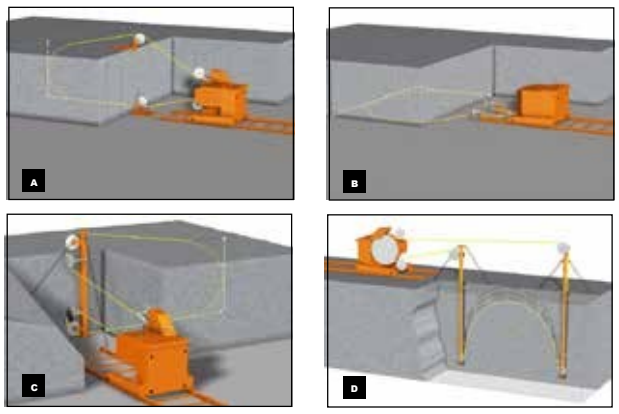

MAR FIL SUPER - MAR FIL SUPER SP

Diamond wire saw for cutting marble with main motor power of 40/50/60/75 HP with fixed wire speed. The translation and 360° rotation of the flywheel-holder head are motorized and allow an easy and fast positioning of the machine as well as the execution of two parallel cuts at the maximum distance of 2100 mm. Both in manual and in automatic working condition suitable motors and automatic mechanism allow the constant control of the diamond wire tensioning. This model compared to the other ones has a bigger flywheel diameter (960 mm). The MAR FIL SUPER SP version is available with 75/100 HP motor. Available on demand four wheel drive model.

ACCESSOARIES

A - Device for starting and finishing cut
B - Device for horizontal cutting
C - Device for 90° cutting
D - Device for the “blind cut“

REMOTE CONTROL
All diamond wire saws on request can be equipped with remote control.
